EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Scott Baum on 12/8/05.

The application has been amended as follows: In claims:

In claim 38, --paper—has been added after "tissue" in lines 2 and 3.

In claim 39, --paper—has been added after "tissue" in all locations in lines 1 and

2.

In claim 47, --paper—has been added after "plies" in lines 2 and 3.

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance: regarding claims 38 and 47, while Angier discloses paper webs, the prior art of record does not teach or fairly suggest tissue paper as conventionally known, i.e. a thin gauzy paper, would be capable of being coated with asphalt without being destroyed or that one in the art would think to use it with asphalt, particularly since the product of Angier is intended to be used as a building material. Regarding claim 1, while Angier discloses treating the web with asphalt(15) it is not considered treating one side of the ply of the multi-ply web as claimed. The only other treatment step in the reference is the step of

Art Unit: 1733

application of the waterproofing material(12) in where webs 5 and 7 join. Therefore, the treating step occurs at the same time as the reorienting. The claim indicates the treated web is placed on a roll, and the treated web is reoriented, forming a reoriented web, and then placed on a second roll. This indicates the treated web and the reoriented web are different, i.e. the steps occur at different times, and since the treatment and reorientation of Angier occur at the same time, the treated web cannot be placed on one roll and the reoriented web be placed on a different roll since the web is treated and reoriented at the same time. Regarding Viberg, since the purpose of the reorientation is to form sterile layers on both sides of a package immediately before formation of the package(Col. 5, ll. 40-Col. 6, ll. 47), it would not have been obvious to re-roll the film after reorientation.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
